NCEES Principles and Practice of Engineering
ARCHITECTURAL ENGINEERING CBT Exam Specifications

Effective Beginning October 1, 2022

- The exam topics have not changed since April 2018 when they were originally published.
- The exam is computer-based. It is closed book with electronic references. Design standards applicable to the PE Architectural Engineering exam are shown on the last page.
- Examinees have 9.5 hours to complete the exam, which contains 85 questions. The 9.5-hour time includes a tutorial and an optional scheduled break. Examinee works all questions.
- The exam uses the U.S. Customary System (USCS) of units.
- The exam is developed with questions that will require a variety of approaches and methodologies, including design, analysis, and application.
- The knowledge areas specified as examples of kinds of knowledge are not exclusive or exhaustive categories.

Number of Questions

1. Building Systems Integration 11–17
   A. Aspects of building performance that affect human comfort (e.g., vibration, noise, lighting, climate control)
   B. Building envelope analysis for integrity and efficiency
   C. Impact of one system on another (e.g., lighting load on air-conditioning system capacity)
   D. Life safety systems (e.g., generators, smoke control, exit lighting, fire alarms)
   E. Comparative systems efficiencies (including calculations for energy use and materials)
   F. Sustainability in design and construction (e.g., energy efficiency, indoor air quality, water conservation)
   G. Applicable standards, codes, and regulations (e.g., NFPA, ASHRAE, ICC, ADA)
   H. Building plans, specifications, and models

2. Electrical Systems 19–29
   A. Electrical power systems, including load flow and distribution
   B. Short circuit analysis
   C. Grounding principles
   D. Electrical construction methods and materials
   E. Overcurrent protection methods and device coordination
   F. Branch circuit and feeder conductor sizing
   G. Power factor correction
   H. Voltage drop calculations
I. One-line diagram  
J. Fire alarm design principles  
K. Lighting calculations (e.g., LPD, zonal cavity)  
L. Lighting control  
M. Receptacle layout  

3. Mechanical Systems  
A. Heat gain and loss calculations  
B. HVAC system analysis and selection (e.g., air cooled/water cooled, all air, heat pumps, split systems)  
C. Energy calculations  
D. Ventilation and pressurization (e.g., outside air requirements, exhaust, kitchen hoods, fume hoods, infiltration)  
E. Indoor air quality  
F. Air distribution  
G. Psychrometrics  
H. Hydronic and steam systems  
I. Fan laws  
J. Pump laws  
K. Pressure loss calculations in ductwork and piping  
L. Materials and methods (e.g., ductwork, piping materials, insulation)  
M. Piping for specialty systems (e.g., fuel oil, natural gas, refrigerant)  
N. Pipe expansion (e.g., expansion joints, loops, anchors)  
O. Flow and riser diagrams (e.g., primary/secondary, variable primary, flow balance, hydraulic bridge location)  
P. Static pressure calculations (e.g., NPSH, static height, pressure in building)  
Q. Equipment selection (e.g., pumps, air handling units, chillers, boilers)  
R. Sequences of operation for building controls  
S. Domestic water systems (e.g., routing, sizing)  
T. Sanitary waste and vent systems (e.g., routing, sizing, slope, invert)  
U. Stormwater systems  
V. Fire protection sprinkler and standpipe systems  

4. Structural Systems  
A. Types of construction (e.g., structural steel, timber, concrete, masonry)  
B. Component forces (e.g., tension, compression, bending, shear)  
C. Structural load effects on electrical, mechanical, and structural systems (e.g., seismic, wind, thermal, vibrations)  
D. Connections (e.g., bolted, welded, base plates, brackets)  
E. Loads (e.g., gravity, lateral, temperature, settlement, construction)  
F. Analysis of trusses, frames, and shear walls  
G. Analysis of construction systems (e.g., staging, bracing, loads)  
H. Analysis of stability (e.g., column buckling, beam lateral torsion buckling, static stability)  
I. Analysis of deflection (e.g., bending, elongation, shortening, lateral)  
J. Design of structural components (e.g., steel beam, wood column, economy)  
K. Foundations (e.g., piles, piers, spread)  
L. Material characteristics of steel, concrete, masonry, and timber (e.g., strength, stiffness, hardness, fatigue concerns)
5. **Project Management and Construction Administration**

A. Differing site conditions
B. Alternates (e.g., bid alternates, substitutions, prior approvals)
C. Contract administration correspondence (e.g., request for information, architect's supplemental instruction, change order, progress report, quality control)
D. Construction documents and the submittal process
E. System conflict resolution
F. Scheduling of design tasks, sequence of activities, CPM
G. Quality control
H. Legal issues (e.g., contracts, impact of decisions that may result in lawsuit, errors and omissions)
In addition to the *PE Architectural Engineering Reference Handbook*, the following codes and standards will be supplied in the exam as searchable, electronic pdf files with links for easy navigation. This NCEES [YouTube video](https://www.youtube.com/watch?v=example_video_id) shows how the standards will be presented on the exam. Standards will be provided as individual chapters on the exam, and only one chapter at a time can be opened and searched. This ensures the exam software runs large files effectively.

Solutions to exam questions that reference a standard of practice are scored based on this list and the revision year shown. Solutions based on other standards will not receive credit. All questions use the U.S. Customary System (USCS) of units.

NCEES does not sell design standards or printed copies of the NCEES handbook. The NCEES handbook is accessible from your [MyNCEES](https://www.example.com) account. Design standards are available through the publisher or a bookseller.
