• The exam is computer-based. It is closed book with electronic references. The NCEES PE Civil Reference Handbook is included in the exam along with the design standards shown on the last two pages.
• Examinees have 9 hours to complete the exam, which contains 80 questions. The 9-hour time includes a tutorial and an optional scheduled break. Examinees work all questions.
• The exam uses both the International System of units (SI) and the US Customary System (USCS).
• The exam is developed with questions that will require a variety of approaches and methodologies, including design, analysis, and application.
• The examples specified in knowledge areas are not exclusive or exhaustive.

Number of Questions

1. Analysis of Structures–Loads and Load Applications 12–18
   A. Dead loads
   B. Live loads
   C. Construction loads
   D. Wind loads
   E. Seismic loads
   F. Moving loads (e.g., vehicular, cranes)
   G. Snow, rain, and ice
   H. Impact loads
   I. Earth pressure and surcharge loads
   J. Tributary areas and load paths (e.g., lateral and vertical)
   K. Load combinations

2. Analysis of Structures–Forces and Load Effects 17–26
   A. Diagrams (e.g., shear and moment)
   B. Axial (e.g., tension and compression)
   C. Shear
   D. Flexure
   E. Combined stresses
   F. Deflection
   G. Special topics (e.g., torsion, buckling, fatigue, progressive collapse, thermal deformation, bearing)
3. Temporary Structures and Other Topics ................................. 5–8
   A. Special inspections
   B. Submittals
   C. Formwork, falsework, scaffolding, shoring and reshoring, bracing, and anchorage
   D. Impact of construction on adjacent facilities
   E. Safety (e.g., construction, roadside, work zone)

4. Design and Details of Structures—Materials and Material Properties ........ 10–15
   A. Soil classification and soil properties (e.g., strength, permeability, compressibility, phase relationships)
   B. Concrete (e.g., unreinforced, reinforced, cast-in-place, precast, pre-tensioned, post-tensioned)
   C. Steel (e.g., structural, cold-formed)
   D. Timber
   E. Masonry (e.g., brick veneer, CMU)
   F. Material test methods and specification conformance (e.g., concrete, steel, masonry, timber, other construction materials)

5. Design and Details of Structures—Component Design and Detailing .......... 26–39
   A. Horizontal members (e.g., beams, slabs, diaphragms, struts)
   B. Vertical members (e.g., columns, bearing walls, shear walls)
   C. Systems (e.g., trusses, braces, frames, composite construction)
   D. Connections (e.g., bolted, welded, bearing, embedded, anchored, post-installed anchors)
   E. Shallow foundations (e.g., footings, combined footings, slabs, mats)
   F. Deep foundations (e.g., piers, piles, caissons, drilled shafts)
   G. Retaining walls
In addition to the NCEES PE Civil Reference Handbook, the following codes and standards will be supplied in the exam as searchable, electronic pdf files with links for easy navigation. This NCEES YouTube video shows how standards will be presented on the exam. Standards will be provided as individual chapters on the exam, and only one chapter at a time can be opened and searched. This ensures the exam software runs large files effectively. The handbook and design standards will be available the entire exam.

Solutions to exam questions that reference a standard of practice are scored based on this list and the revision year shown. Solutions based on other standards will not receive credit.

NCEES does not sell design standards or printed copies of the NCEES handbook. The NCEES handbook is accessible from your MyNCEES account.

CFR TITLE 29  
Part 1910  
Occupational Safety and Health Standards  
• Subpart I, Personal Fall Protection Systems, 1910.140  
• Subpart D, Walking-Working Surfaces, 1910.28–1910.30  

Part 1926  
Safety and Health Regulations for Construction.  
• Subpart E, Personal Protective and Life Saving Equipment, 1926.104  
• Subpart L, Scaffolding Specifications, Appendix A  
• Subpart M, Fall Protection, 1926.500–1926.503, Appendix B–Appendix D  
• Subpart Q, Concrete and Masonry Construction, 1926.703–1926.706, with Appendix A  
• Subpart R, Steel Erection, 1926.752 & 1926.754–1926.758

TMS 402/602  

Notes  
1. Errata was published in May, 2018 for AASHTO LRFD Bridge Design Specifications, 8th edition. The errata document is available for download at [www.transportation.org](http://www.transportation.org).  
2. Examinees will use only the Allowable Stress Design (ASD) method for wood design.
