Surveying Engineering at Ferris State University

Hey, where have you been? Haven't seen you around in a while.

I'm studying Surveying Engineering at Ferris State University.

It's about mapping and measurements using GIS, GPS, LiDAR, drones, and advanced equipment. I like math and being outside, hence a great fit for me. Graduates of this program can become a licensed surveyor and engineer! That's two licenses with one degree.

Hmm... but are there any jobs? How will you pay back your loans?

There are jobs from Alaska to Florida! Work is well paid starting as much as $80K.

Pay can go up to $90K depending on the industry. Summer jobs pay around $25 per hour.

Who hires surveyors? What is your future like?

I can work for government agencies like NOAA, NGA, USGS, USDA, private companies, or start my own company after getting sufficient experience.

It's a great program! Offers over $26K in annual scholarships, some for only female students. There are also national and regional scholarships!

Sounds great! Who should I contact?

Contact Dr. Barsai at (231) 591-3115 or email barsai.g@ferris.edu

I didn't know such a program existed at Ferris State University!
